PITCH DECK

ADITI DANKAR

MACHINE LEARNING ENGINEER

HALF RESEARCH SCIENTIST. HALF SOFTWARE ENGINEER.
100% INDUSTRY READY.

THE PROBLEM

THE TWO KINDS OF ML HIRES...

1.

THE THEORIST

Most ML Researchers can’t write production code.

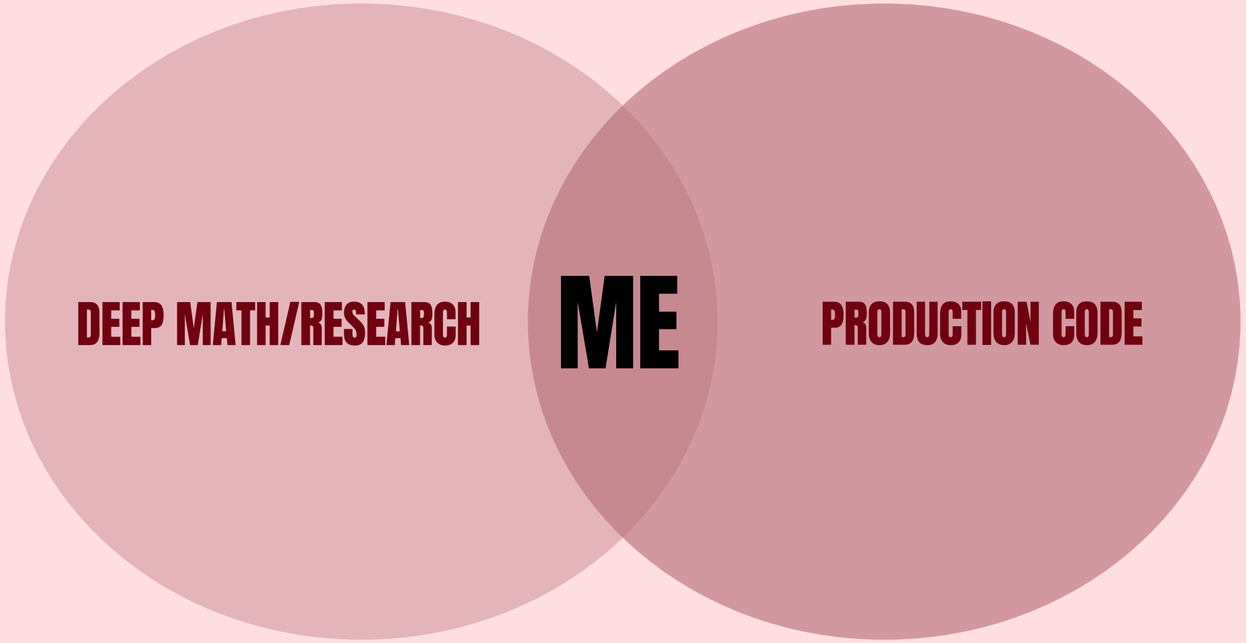
2.

THE CODER

Most Software Engineers don't understand the math behind Diffusion.

THE SOLUTION

I LIVE IN THE MIDDLE. I DON'T JUST BUILD MODELS IN A NOTEBOOK; I BUILD SYSTEMS THAT LIVE IN THE REAL WORLD.



THE ENGINEERING EXPERIENCE

I SURVIVED 2 YEARS OF ENTERPRISE-GRADE SCRUM. I KNOW HOW TO SHIP, NOT JUST STUDY.

2+ years as a Software Engineer at Wipro.

What researchers often lack: Clean & production-ready Code, CI/CD, and Scalability.

I live in Git and speak Agile.

THE RESEARCH BRAIN

I DON'T JUST 'USE' MODELS; I UNDERSTAND THE ARCHITECTURE WELL ENOUGH TO FIX THEM WHEN THEY FAIL.

I've worked at the top institutes in India, solving 'unsolvable' problems.

The Results:

- PCB Object Detection: 94% Precision.
- Pulsating Star Classification: 83% Recall.

THE MASTERPIECE

71.8% ERROR REDUCTION. NEED I SAY MORE?

I didn't just write master’s thesis; I built a novel multi-modal pipeline.

Trajectory-Conditioned Diffusion: Bringing spatial control to generative dance.

I introduced a new metric because standard metrics weren't good enough for the results I wanted.

TECHNICAL ARSENAL

S-TIER
PyTorch, Python, Deep Learning

Maxed-out stats.

HEAVY ARTILLERY
Transformers, Diffusion Models, Computer Vision

My research-grade weapons.

THE ENCHANTED GEAR
NLP (BERT, T5), Attention Mechanisms, Multi-modality

The Secret Sauce.

THE UTILITY BELT
Git/Version Control, HPC, Agile/Scrum, Linux/Unix, SQL

The Deployer.

CURRENT QUEST
RAG, Agentic AI, Docker

Unlocking the "Agentic Architect".

HIRING ME IS EASIER THAN YOU THINK!

- Graduate Visa Status: I have the right to work in the UK today. No sponsorship paperwork, no delays, no administrative headaches for 2 years.
- The 'Free Trial' Period: Think of it as a 24-month high-performance trial. I’m already in London; I can start Monday.
- The Value: You get a Distinction-level QMUL graduate with international research experience without the usual immigration friction.

LET'S BUILD THE FUTURE

WHY WAIT FOR THE 'PERFECT' CANDIDATE WHEN THE 'HYBRID' IS RIGHT HERE?

I'm looking for a team that values both the 'Why' (Research) and the 'How' (Engineering).
